RunPod Usage Declaration

Lets go · Milestone2Cash Proof-to-Cash · Domain 2 - ALPHA RED

RunPod was not used for this implementation. The team confirmed this usage status on 24 October 2026. Model inference is accessed directly through the hosted DeepSeek API. The team did not deploy a GPU workload, train a model or fine-tune a model.

Local OCR	Tesseract.js with pretrained English and Simplified Chinese data; run in the Node application.
Hosted model	DeepSeek hosted API, requested model deepseek-flash; no team-operated GPU endpoint.
Training / fine-tuning	No model training or fine-tuning is claimed.
RunPod resources used	None. Pod ID, endpoint URL, GPU type, runtime and account-usage screenshot are not applicable to the declared non-use.
Hosting actually used	Replit shared demonstration deployment; see the separate Replit proof-of-use file.

Actual platform use

This document records the project's actual platform use. Model inference uses the DeepSeek hosted API; application hosting uses Replit. No RunPod pod, GPU endpoint, compute runtime or training job was used.

Usage status confirmed by the team on 24 October 2026. Project leader: Jiazhong Yang. Document updated on 25 October 2026.
